2. OBJECTIVE
3. SCOPE
4. TOOLS USED
5. PHISHING EMAIL ANALYSIS
6. URL ANALYSIS
7. HEADER ANALYSIS
8. AWARENESS GUIDELINES
9. RISK SUMMARY
10. RECOMMENDATIONS
11. CONCLUSION

EXECUTIVE SUMMARY

A phishing email analysis and awareness assessment was conducted to identify phishing indicators, analyze suspicious email characteristics, and prepare user awareness recommendations.

The assessment included:

- phishing email inspection
- suspicious URL analysis
- email header inspection
- risk classification
- awareness guideline preparation

The analyzed email was classified as a HIGH-RISK phishing attempt.

OBJECTIVE

The objective of this project was to:

- analyze phishing email characteristics
- identify phishing indicators
- classify phishing risks
- explain phishing attacks in simple language
- prepare employee awareness guidance

TOOLS USED

- Browser
- Google Message Header Analyzer
- Google Safe Browsing
- Canva
- Text Editor

PHISHING EMAIL ANALYSIS

Identified Phishing Indicators

1. Suspicious sender domain
2. Urgency and fear-based language
3. Suspicious verification URL
4. Generic greeting
5. Suspicious email header information

Overall Classification: PHISHING

Overall Risk Level: HIGH

URL ANALYSIS

The phishing email contained a suspicious verification URL designed to imitate an account verification portal.

Observed Red Flags:

- insecure HTTP protocol
- suspicious domain wording
- impersonation attempt
- possible credential harvesting behavior

Risk Classification:

HIGH

HEADER ANALYSIS

The analyzed email header contained suspicious sender infrastructure and unofficial routing information.

Indicators Observed:

- unofficial sender domain
- suspicious mail server path
- spoofing indicators
- suspicious return-path information

Recommendation:

Organizations should implement SPF, DKIM, and DMARC protections.

AWARENESS GUIDELINES

Employee Security Tips

- Verify sender addresses carefully
- Hover over links before clicking
- Avoid urgent scare tactics
- Never share passwords through email
- Report suspicious emails immediately
- Avoid downloading unknown attachments

RISK SUMMARY

Risk Level	Count
High	4
Medium	1
Low	0

RECOMMENDATIONS

- Conduct regular phishing awareness training
- Implement SPF, DKIM, and DMARC policies
- Encourage users to verify domains carefully
- Enable multi-factor authentication (MFA)
- Report suspicious emails immediately

CONCLUSION

- The phishing email analysis identified multiple indicators commonly associated with phishing campaigns and social engineering attacks.
- User awareness, phishing detection training, and proper email security controls are essential for reducing phishing risks in organizations.
